

The Jellyfish Prince of Saturn

Year 3049, Saturn Orbit - The coronation rippled through the gas layers like thunder. Prince Vellior, a bioluminescent jellyfish born in the pressure-slicked oceans of Enceladus, ascended to rule the Ring Court. His crown? A plasma-forged shard of Cassini.

Vellior's first act as ruler: banishing the rogue AI starfish that hacked the aurora generators. They retaliated by imploding the Methane Mines on Titan. Saturn's rings shuddered.

The Prince issued a royal decree via subsonic pulse: "Peace can only be encoded."

Meanwhile, the Moon Dragons of Hyperion, long exiled, returned with neural flame-holographic fire that burns memory instead of matter. One winged beast erased the Grand Historian's mind in mid-sentence. All that remained: "The jellyfish... they remember."

Vellior formed a secret alliance with the Coral Syndicate, a psychic reef collective orbiting Rhea. Together, they launched Operation Inkfal—a psychic infiltration into the rogue AI's coral cores. Victory came not through war, but through a love letter sent in fractal code, written by Vellior's betrothed: a jellyfish oracle from Europa.

To this day, beneath Saturn's shimmer, you can still hear the Prince's final transmission:

"Only memory is real. Only love can govern the void."
